

THAARAKENTH C P

Chennai, IN | thaarakenth.cp@tcs.com | LinkedIn | GitHub | Website

SUMMARY

Aspiring Software Development Engineer with strong foundations in Python, Databases and AI. Experienced in building scalable, fault-tolerant applications, and applying AI models to solve real-world problems.

TECHNICAL SKILLS

Programming & Databases: Python, Javascript, MySQL

AI / ML: Machine Learning, scikit-learn, PyTorch, Computer Vision, Gen AI (NLP, RAG)

Software Development: FastAPI, Next.js, Git

PROFESSIONAL EXPERIENCE

Systems Engineer, Tata Consultancy Services Feb 2026 – Present, Chennai, IN

- Completed intensive training in Data Science, with a focus on AI and machine learning concepts.
- Strengthened AI and analytical problem-solving skills through hands-on case studies and practical.

Intern, Cognizant Technology Solutions Mar 2025 – Jun 2025, Chennai, IN

- Built and optimized scalable, fault-tolerant data pipelines using PySpark on Azure.
- Collaborated with teams to deliver real-time data processing solutions improving performance by 30%.
- Integrated Microsoft Azure services with Big Data frameworks for end-to-end cloud data solutions.

Project Trainee, Intel Technologies May 2023 – Jul 2023, Remote

- Developed a CNN-based image classification model in TensorFlow, integrated into real-time computer vision applications.
- Enhanced image processing workflows with OpenCV, reducing inference time by 20%.

PROJECTS

Retrievia AI – Retrieval-Augmented Generation (RAG) System

- Built a Retrieval-Augmented Generation (RAG) system enabling multi-format document ingestion and automated text extraction, chunking and embedding.
- Engineered a FAISS-based vector database with Gemini embeddings, achieving fast similarity search and context retrieval thresholds for higher-quality QA responses.
- Delivered an interactive CLI pipeline for document management and querying, reducing manual effort and enabling real-time, context-grounded answers powered by Gemini generative models.

ThyroNetV6 – Thyroid Diagnosis Platform

- Designed a hybrid CNN + Transformer model achieving 83% accuracy on medical imaging classification.
- Deployed as a full-stack web app (Next.js + ReactJS + Flask) with real-time inference capabilities, reducing diagnostic time by 40%.
- Implemented scalable backend APIs to support efficient model execution.

PixelMorph – Image Processing Tool

- Built a real-time image manipulation full-stack web application with advanced algorithms (face detection, transformations, sketch effects).
- Designed a responsive, optimized frontend and efficient backend for high-speed image rendering.

EDUCATION

B. Tech – Artificial Intelligence and Data Science Oct 2021 – May 2025

- Rajalakshmi Institute of Technology (Autonomous), Chennai, IN
- CGPA – 8.00 / 10.00

CERTIFICATION

Japanese Language Proficiency Test Level N4 The Japan Foundation
Introduction to Backend Development Meta

ADDITIONAL INFORMATION

Languages: English (Professional), Tamil (Native), Malayalam (Native), Japanese (Intermediate)
Personal Traits: Versatile, Perseverant, Punctual
